we're all smiles.®

BITE PLATES, OCCLUSAL SPLINTS & SLEEP APNEA DEVICES we're all smiles.®

Giorgio Dental only use the finest imported materials to produce our range of Bite Plates from Astron Clear Splint and Proform Dual Laminates ensuring that you receive the best possible results for your patients. Our Bite Plates can be used to treat protect Dentition post restoration, Bruxism, TMJ and other related conditions.

We also produce Sleep Apnoea devices, most notably with the utilisation of the Australian Titratable MDSA® Component. Over the last 10 years the MDSA® concept has been subjected to extensive scientific and clinical testing and evaluations.

The MDSA® mandibular repositioning appliance moves the mandible and associated structures like the tongue forward and prevents the throat from collapsing during sleep.

The MDSA® concept was designed in conjunction with Australia's leading Dentists, Sleep Physicians and Dental Technicians to overcome the limitations of all other appliances available to treat the needs of their patients.

As is the case with most of our Products, Splints and other related devices can be produced with some elements of our Digital Workflow including 3D printing of working models as well as milling of splints. Intraoral Scans are welcome for these indications.
